

Garry Boyle, Innovation Adviser at Innovate UK EDGE at UCL

“NLSQL is a Business Intelligence software solution, that empowers clinicians with intuitive search to poorly-accessible data, leading to make faster and more accurate clinical decisions, particularly for more complex patients with multiple concurrent chronic conditions following emergency admissions.

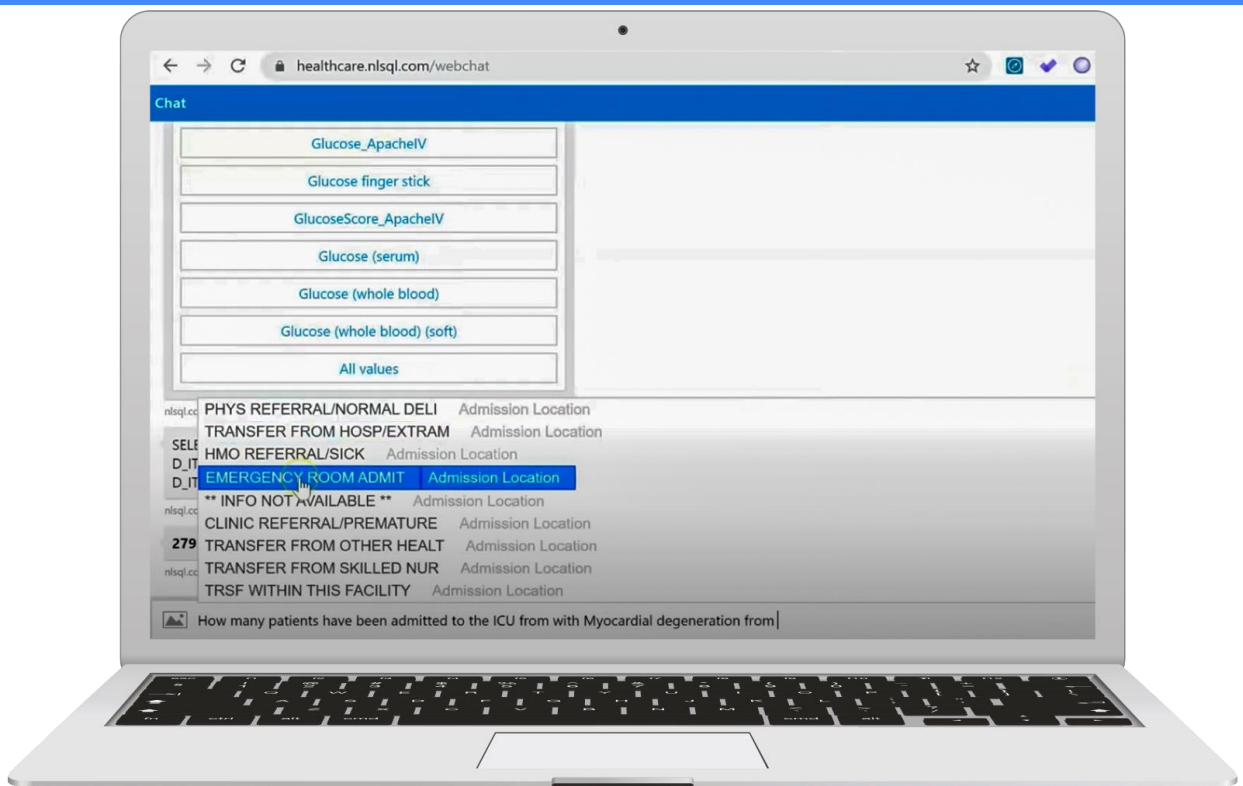

Using NLSQL key stakeholders can detect where to focus resources to bring the best patients outcome”

“Medical Business Intelligence” is the first specialized interface between medical staff and databases. Doctors and nursing staff can intuitively extract relevant information from the generated data using a chat interface (known from “Whatsapp” or similar chat systems) without learning complex syntax. Through Natural Language Processing NLSQL Healthcare BI understands the relationships and connections in spoken and written natural language.”

Google-like search for
Intensive Care Unit data

Why NLSQL?

NLSQL software empowers clinicians with intuitive real-time search for poorly-accessible clinical data to inform and speed clinical decisions with significant benefits for healthcare. Anyone can request granularity reports and data visualisations using only natural language requests.

Simple

Easy as

Compatible

Fits existing IT
environment

What do we need?

NLSQL is looking to collaborate with a hospital or other healthcare provider with a view to validating our software using partner's clinical data ahead of the launch of our commercial product.

We are open for potential collaboration and investment opportunities.

Ongoing projects:
